Education

Wesleyan University

Expected May 2028

- B.A. Computer Science & IDEAS, GPA: 4.0/4.0, Freeman Asian Scholar (Full-ride Merit Scholarship)
- Activities: Make Games @ Wes, CodeWes, Soft Robotics Lab, McKensie-Smith Lab, VSA, FASA

Experience

IndieCade, Gameplay Programmer Intern "It Takes Time" | C#, Unity, GitHub

Jun 2026 - Aug 2026

- Led programming across a **5-person Agile team**, implementing **core gameplay systems** including UI, puzzle mechanics, save/load, and game management in C#/Unity over 4 sprints.
- Built **custom tooling** for asset integration and imports, reducing **asset import time by 35%** and **build size by 50%**; shipped the **climate-focused game** for IndieCade's Climate Solutions Anthology Bundle on Steam and Climate Jam 2026.

Soft Robotics Lab, Undergraduate Research Assistant

Jan 2026 - Current

- Designed and built a **Python** data pipeline (**ffmpeg, NumPy, scikit-learn**) automating fruit fly species identification and interaction detection across **TBs** of tracking/imaging data, cutting manual annotation time by **25%**
- Improved classification accuracy by **30%** via integrating new detection methods; preparing the package for public PyPI release alongside a research publication.

Wesleyan University, Teaching Assistant

Jan 2026 - May 2026

- Co-instructed "**Introduction to Python and Computational Knitting**" for **~30 students**, creating and grading assignments and leading knitting-machine tutorials that connected programming concepts to textile fabrication.

Vbee AI, AI Engineer Intern

Jul 2025 - Aug 2025

- Developed automated benchmarks using **PhoWhisper (VinAI)** and **Audiobox-Aesthetics (Meta)** for **2 unreleased Vietnamese text-to-speech AI models**, to assess speech quality and model performance, resulting in a **30% reduction** in manual evaluation time
- Built an internal web platform supporting **20+ internal evaluators** in collecting structured human feedback on **1000+ audio samples**

Technical Projects

Fluidity, 1st Place @ IDEA350 Game Jam (fluidity-website)

Godot, GDScript, Quark Physics Engine, GitHub

- Developed a **2D educational platformer** teaching the water cycle on a **5-person Agile team**, implementing core gameplay systems and soft-body water physics in Godot with Quark Physics Engine.
- Built **internal Godot tooling** for asset integration and gameplay tuning, enabling designers and artists to iterate in-engine; validated mechanics through playtesting with **100+ elementary students** at MacDonough Elementary School.

"Trust Me, I Was There!", Summer Comfy Jam 2026 (itch.io)

Unity, C#, Figma, Trello, GitHub

- Led a **3-person team** as **Project Lead and Gameplay Engineer**, implementing the full gameplay loop, evidence collection, testimony verification, and scoring systems for a narrative game about conflicting eyewitness testimony.
- Ranked **Top 15%** out of **450 submissions** in Summer Comfy Jam 2026, incorporating feedback from **12 playtesters** to refine gameplay and narrative systems.

SHADOWBAN, UNESCO Youth Hackathon 2026 (github)

React, TypeScript, Node.js, Socket.IO, Render, Linear

- Directed a **5-person Agile team** as **Lead Developer**, architecting a **hybrid physical-digital social-deduction game** centered on misinformation and algorithmic manipulation.
- Built a **real-time multiplayer companion app** with **React, TypeScript, Node.js, and Socket.IO**, synchronizing private roles, abilities, timers, voting, and hidden game state across players.

Skills, Technologies, and Awards

Skills: C++, C#, Python, GDScript, JavaScript/TypeScript, React, NodeJS, HTML/CSS

Technologies: Unity, Godot, Love2D, Figma, Git/Github, Trello, Linear, Firebase, PostgreSQL

Awards: Vietnam Prime Minister's Award Of Merit, Top 8 Finalist Vietnam National Innovation Competition
